## Coordinate geometry - Points to Remember

## 1. Basics of Co-ordinate geometry:

(i) The abscissa and ordinate of a given point are the distances of the point from $y$-axis and $x$ - axis respectively.
(ii) The coordinates of any point on x - axis are of the form ( $\mathrm{x}, 0$ ).
(iii) The coordinates of any point on y - axis are of the form $(0, \mathrm{y})$.

## 2. Distance Formula:

(i) The distance between points $\mathrm{Px} 1, \mathrm{y} 1$ and $\mathrm{Qx} 2, \mathrm{y} 2$ is given by $\mathrm{PQ}=(\mathrm{x} 2-\mathrm{x} 1) 2+(\mathrm{y} 2-\mathrm{y} 1) 2$
(ii) The distance of a point $\mathrm{P}(\mathrm{x}, \mathrm{y})$ from the origin $\mathrm{O}(0,0)$ is given by $\mathrm{OP}=\mathrm{x} 2+\mathrm{y} 2$

## 3. Section Formula:

The coordinates of the point which divides the join of points $\mathrm{Px} 1, \mathrm{y} 1$ and $\mathrm{Qx} 2, \mathrm{y} 2$ internally in the ratio m:n are $m x 2+n x 1 m+n, m y 2+n y 1 m+n$

## 4. Mid-point Formula:

The coordinates of the mid-point of the line segment joining the points $\mathrm{Px} 1, \mathrm{y} 1$ and $\mathrm{Qx} 2, \mathrm{y} 2$ are $\mathrm{x} 1+\mathrm{x} 22, \mathrm{y} 1+\mathrm{y} 22$.

## 5. Centroid Formula:

The coordinates of the centroid of a triangle formed by the points $\mathrm{Ax} 1, \mathrm{y} 1, \mathrm{Bx} 2, \mathrm{y} 2$ and $\mathrm{Cx} 3, \mathrm{y} 3$ are $\mathrm{x} 1+\mathrm{x} 2+\mathrm{x} 33, \mathrm{y} 1+\mathrm{y} 2+\mathrm{y} 33$.

## 6. Area of Triangle:

The area of the triangle formed by the points
Ax1, y1, Bx2, y2 and Cx3, y3 is $12 \mathrm{x} 1 \mathrm{y} 2-\mathrm{y} 3+\mathrm{x} 2 \mathrm{y} 3-\mathrm{y} 1+\mathrm{x} 3 \mathrm{y} 1-\mathrm{y} 2$ or $12 \mathrm{x} 1 \mathrm{y} 2+\mathrm{x} 2 \mathrm{y} 3+\mathrm{x} 3 \mathrm{y} 1-\mathrm{x} 1 \mathrm{y} 3+\mathrm{x} 2 \mathrm{y} 1+\mathrm{x} 3 \mathrm{y} 2$

## 7. Collinearity of Points:

If points $A x 1, y 1, B x 2, y 2$ and $C x 3, y 3$ are collinear, then $x 1(y 2-y 3)+x 2(y 3-y 1)+x 3(y 1-y 2)=0$
