## Statistics - Points to Remember

## 1. Measures of Central Tendency:

(i) Mean
(ii) Median and
(iii) Mode

## 2. Methods of Finding Mean:

(i) Direct method
(ii) Shortcut Method
(iii) Step-deviation method

## 3. Arithmetic Mean:

If a variate X takes values $\mathrm{x} 1, \mathrm{x} 2, \ldots$, xn with corresponding frequencies $\mathrm{f} 1, \mathrm{f} 2, \ldots, \mathrm{fn}$ respectively, then the arithmetic mean of these values is given by
(i) $\mathrm{X}^{-}=1 \mathrm{~N} \sum \mathrm{i}=1$ nfixi, where $\mathrm{N}=\sum \mathrm{i}=\ln$ fi
(ii) $\mathrm{X}^{-}=\mathrm{A}+1 \mathrm{~N} \sum \mathrm{i}=1$ nfidi, where $\mathrm{di}=\mathrm{xi}-\mathrm{A}$ and the number A is called the assumed mean.
(iii)Ifui $=x i-A h, i=1,2, \ldots, n$. Then, $\mathrm{X}^{-}=\mathrm{A}+\mathrm{h} 1 \mathrm{~N} \sum \mathrm{i}=1$ nfixi

## 4. Median:

(i) The median is the middle value of a distribution i.e. the median of a distribution is the value of the variable which divides it into two equal parts.
(ii) The median of a grouped or continuous frequency distribution may be computed by using the following formula:

Median $=1+\mathrm{N} 2-\mathrm{Ff} \times \mathrm{h}$, where
$\mathrm{l}=$ lower limit of the median class.
$\mathrm{f}=$ frequency of the median class.
$\mathrm{h}=$ width of the median class.
$\mathrm{F}=$ cumulative frequency of the class preceding the median class and, $\mathrm{N}=\sum \mathrm{i}=1$ nfi
(iii) Ogive(s) can be used to find the median of a frequency distribution.

## 5. Mode

(i) Mode is the value of the variable which has the maximum frequency.
(ii) The mode of a continuous or grouped frequency distribution may be computed by using the following formula:

Mode $=1+\mathrm{f}-\mathrm{fl} 12 \mathrm{f}-\mathrm{fl}-\mathrm{f} 2 \times \mathrm{h}$, where
$\mathrm{l}=$ the lower limit of the model class.
$\mathrm{f}=$ frequency of the model class.
$\mathrm{h}=$ width of the model class.
$\mathrm{fl}=$ frequency of the class preceding the modal class.
$\mathrm{f} 2=$ frequency of the class following the modal class.

## 6. Relation Between Measures of Central Tendencies:

Three measures of central value are connected by the following relation: Mode=3 Median-2 Mean
